

Water, Water, Everywhere!

Name _____ Date _____

Directions: Write your responses on this sheet or on separate paper.

1. What are the three states in which water can be found naturally?
2. What causes water to evaporate, and why is evaporation important to the water cycle?
3. How does water get into an underground aquifer?

4. How does water move through the water cycle?
Draw at least three arrows on the picture to indicate the movement of water molecules.

5. Think about how people affect the water cycle. Do you think it is important to conserve water? Why or why not?
