

Water, Water, Everywhere!

Name _____ Date _____

Directions: Write your responses on this sheet or on separate paper.

1. In which three states can water be found naturally?
2. What causes water to evaporate, and why is evaporation important in the water cycle?
3. How does water get into an underground aquifer?

4. How does water move through the water cycle? Draw arrows and labels on the picture to indicate the movement of water molecules.

5. Do you think it is important for people to conserve water? Why or why not?
